Programming Languages/Markup Languages: JavaScript, TypeScript, Python, PHP, HTML, Markdown, CSS
Framework & Libraries: ReactJS, NextJS, ExpressJS, NodeJS, AJAX, MySQL, Bootstrap
Technologies: Git, Trello, Bitbucket, Slack, SourceTree, JIRA, Visual Studio Code, Postman, Figma, Terminal, LAMP, Wordpress

Work Experience

FRONTEND DEVELOPER - THORIUM DIGITAL, LLC.   Oct 2018 - Present

- Architect frontend, backend, and data retrieval mechanisms for multiple high profile brand websites
- Convert wireframes to web pages using NextJS, ReactJS, SCSS, and any other necessary frameworks/technologies
- Create high quality ReactJS/TypeScript components for high profile brand websites such as Ciroc, Don Julio, and Smirnoff
- Conduct browser performance tuning, testing, refactoring, and debugging to ensure proper functionality of pages and features
- Ensure that all website vulnerabilities from an external security report are handled without any impact on the site
- Work with each client to create a roadmap in order to provide support, resulting in increased satisfaction and 100% retention
- Provide high quality design, technical, and procedural feedback to high profile brand websites such as Ciroc, Don Julio, and Smirnoff
- Successfully prioritize tasks and work independently in a fast-paced environment

Projects and Experience

FULL STACK DEVELOPER - SYSTEMS INTEGRATION PROJECT   Jan 2018 - May 2018

Created a Pokemon Team Builder SAAS using PokeAPI and RabbitMQ as my senior capstone project.

- Integrated a third party data source with a custom front end through a multiple server environment
- Programmed front end in Bootstrap, AJAX, JavaScript, HTML, and CSS
- Integrated front end Apache with RabbitMQ messaging queue
- Programmed DMZ functions in PHP and recorded data through MySQL
- Acted as the project manager for the team ensuring that deliverables were met on time
  - Integrated a Trello board that team members would use to track outstanding tasks and what has been completed

STUDENT ANDROID DEVELOPER - HANYANG UNIVERSITY   Mar 2017 - Jun 2018

Project involved remodeling and working on Hanyang University's Android portal using a mix of front-end technologies and Java. The Android and iOS team closely collaborated with the design team to improve the portal's features and functionality. The portal was used by all Hanyang students for a majority of campus activities and news.

- Researched and worked with senior programmers on implementing features useful for students and staff
- Worked with the design team to test different UI layouts and designs
- Surveyed other international and exchange students on features they would like to see improved on or added

Education

New Jersey Institute of Technology
Bachelor of Science in Information Technology
3.64 GPA, Dean's List, Cum Laude

Hanyang University - Seoul Campus
Computer Science and Engineering
3.4 GPA
